

Vision correction while you *sleep!*

LIVE LIFE TO THE FULLEST IT'S POSSIBLE WITH ORTHO-K

Gelflex Orthokeratology (Ortho-K) lenses provide visual freedom, allowing you to enjoy most day time activities without glasses or contact lenses.

Have you ever imagined enjoying your daytime activities without the inconvenience of glasses or contact lenses? Then you should ask your optometrist about Gelflex Ortho-K lenses.

Ortho-K as it is commonly called, is a contact lens you wear at night and remove in the morning. While you sleep, the specially designed lens gently reshapes the cornea of your eye to correct your vision.

Over one million patients have used the procedure and unlike surgery, the procedure can be safely discontinued or reversed at any time.
